INTENT ASSESSMENT OF PILOT SITES TO TEST WP OUTPUTS (O.T1.1 AND O.T2.4) D.T3.1.1

Assessment of local ICT capacities at the INTENT project pilot centers

Version 1
03 2019

We kindly ask each project coordinator at the INTENT pilot centers to assess local ICT capacities for the benchmarking exercise by the following survey.

Electronic Patient Record (EPR)

Please describe the ICT system used at your institute in terms of EPR (Electronic Patient Record). An EPR, also referred to sometimes at Electronic Health Record is a way or a tool to view a patient's medical record a computerize interface. Examples of data that can be stored in an EPR are:

• Vital patient functions (blood pressure, temperature)

• Diagnosis and treatment plans

• Summary of outpatient visits

Please give a description (no longer than one paragraph) of the system and for which purposes it is used. If different ICT systems are in place for this purpose, please describe all of them. Please also indicate what kind of data is being stored, how long, who is handling the system and how access is granted on an institutional level.

External exchange of data

Please describe if it is possible to share data from your institute with external parties such as other hospitals or care facilities. Please give a description of the possibilities to share information with external parties. If so, what kind of information (for example data from the EPR). Please describe with whom this data is shared (no longer than one paragraph).

Purpose and Content of Patient Level Data Files

Please also describe specifically, whether and how you provide patient-level data files for administrative (health insurance claims), cancer registry or similar purposes. Please provide a concise description of type and content of data files (no longer than one paragraph).
